

Module 5. Exponential & Logarithmic Models

PROBLEM:

On the following table you have data of the global population on the 20^{th} century.

Year (t)	Global Population (in millions)
1900	1650
1910	1750
1920	1860
1930	2070
1940	2300
1950	2520
1960	3020
1970	3700
1980	4450
1990	5300
2000	6060

Define a model in Geogebra or Desmos to predict the global population in 2030.
